Move The Credit Frontier Forward

CriAT is a spin-off fintech company from the National University of Singapore. We provide new-generation credit analytics and deliver proprietary, superior solutions in credit risk management to meet various needs of clients. Our solutions are powered by cutting-edge analytical technologies and augmented by indepth domain knowledge – making us unique.

Vision

Promote the "DEEP" in credit risk management – deep in technologies, deep in applications.

Mission

Help our clients advance credit risk management and embrace the analytics-driven future.

Bring New-Generation Analytics to You

DeepCredit® Analytics, comprised of a variety of our cutting-edge analytical technologies, is the core of our high-end services.

Granularity

To tell good vs bad credit only isn't sufficient.

Probability of default is the most granular information.

Term Structure

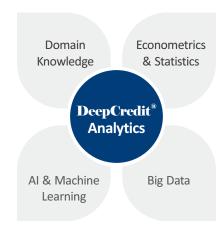

Credit may be good over a short horizon but actually bad for a long horizon.

Credit analysis should exhibit the term structure phenomenon catering to practical applications.

Default Correlations

Analyzing individual names marginally isn't sufficient as defaults tend to cluster in time and in industry.

Handling default correlations is vital in managing portfolio credit risk.

What-if Analysis

Credit risk cycle should never be overlooked.

Link credit risk to macroeconomic and financial risk factors to contemplate what-if.

"Start with the problems, and then analytics."
